

VACANCY

Full-Stack Developer

OoluSolar - Dakar, Senegal

Full Time, Contract

About OoluSolar

OoluSolar is an innovative off-grid solar company operating in West Africa. Our mission is to replace dirty and expensive lighting solutions with sustainable energy alternatives for the 150 million people living without electricity in West Africa.

We are a young and dynamic team that quickly became leader in distributing and financing off-grid solar systems in Senegal. With a monthly payment model reducing barriers to access, as well as maintenance, parts and battery replacements included in our service, we save our clients money and assure them a continuous, dependable source of energy.

About the Project

OoluSolar seeks an experienced full-stack developer to build a CRM system supporting the management of our growing customers base and monthly payments. As a full stack developer you will have the opportunity to build new applications from scratch, and influence system design.

Building an easy-to-use and reliable CRM system is an integral component of our strategy to support the scale up of sales (we already have over 7,500 customers) and market expansion (launching more products and establishing distribution networks all over Senegal).

We already started developing the specifications for a custom-made system that will grow with the business to integrate new models and features.

Qualifications and skills

- 3 years of relevant work experience and solid repository on Github (or other repository);
- Proven track record in managing the implementation of business software;
- Knowledge of databases and experience implementing security protocols;
- Preferably programming skills including Python and Django;
- Experience in development phase, debugging, user training and field testing new systems.

OoluSolar is looking for candidates available for full time contract and willing to join the company for 6+ months but we are flexible and open to consider also other types of arrangements (always ensuring high level of quality and reliability during the project).

Application Process

If you are interested in this position, please send your CV with info about the projects you work during the last few years and examples of your code on Github (or other repository) via email (with 'Application IT Developer - ' in the subject) to vincenzo@oolusolar.com.

Deadline for the application 2nd of September.
